

Administer the Controller

This section describes how to administer the AppDynamics Pro Controller. Administration tasks include provisioning users, tuning performance, troubleshooting and maintaining the system, and more.

This section covers these topics:

- [Access the AppDynamics UI](#)
- [Access the Administration Console](#)
- [Start or Stop the Controller](#)
- [Controller Version](#)
- [Modify GlassFish JVM Options](#)
- [User Authentication and Permissions](#)
- [Controller Data and Backups](#)
- [Export and Import Business Application Configurations](#)
- [Controller Performance](#)
- [Internationalization](#)
- [Controller Tenant Mode](#)
- [Customize System Event Notifications](#)
- [Controller Logs](#)
- [Controller Audit Log](#)

For installation information, see [Install the Controller](#). For information about deploying AppDynamics to its live operating environment, see [Deploy AppDynamics in the Enterprise](#).
