Network Visibility

With Network Visibility, you can:

- Answer the key question quickly and easily: *Is the network to blame for any performance issues in my application?*
- Identify the root cause of performance issues in the application, the network, or in application/network interactions (i.e., how an application or server utilizes the network).
- Pinpoint the traffic flows, individual nodes, and transport connections where network or application/network issues are occurring.
- Collect detailed metrics that show how the network is performing and how well your application uses network connections and resources.
- Collect and report targeted troubleshooting information to network, IT, DevOps, and other teams.

---

**Installation and Administration on Linux**

- Set Up Network Visibility on Linux
- Set Up the Network and App Agents on Linux
- Administer Network Agents on Linux

**Installation and Administration on Windows**

- Set Up Network Visibility on Windows
- Install the App Agent on Windows
- Administer Network Agents on Windows

**Using Network Visibility**

- Managing Network Agents in the Controller
- Monitor Network Visibility Metrics
- FAQs and Troubleshooting for Network Visibility
- Advanced Operations
