This topic covers release information for AppDynamics SAP monitoring version 4.4.1808.

Enhancements

The following enhancements were added to this release.

SAP Dialog Transactions Monitoring (SAP GUI)

As of this release, the SAP dialog transactions (SAP GUI transactions) can be monitored using AppDynamics ABAP agent. The new match rule type *GUI transaction* is added to enable monitoring for selected T-codes or application components.

SSL for ABAP-to-SDK Communication

Support for SSL protocol is added for communication between ABAP agent and remote HTTP SDK.

Resolved Issues

Snapshot skipping in C++ SDK

The AppDynamics snapshot viewer was not showing a few snapshots due to a bug in the C++ SDK. It has been resolved in the C++ SDK, Version 4.5.
