

Configure Request IP Address Storage - Browser

For security and privacy reasons, Browser RUM does *not* store source IP addresses associated with requests. To have Browser RUM store IP addresses associated with requests, follow the instructions below.

1. Open the browser application in which you are interested.
2. On the left navigation bar, select **Configuration**.
3. Click **Instrumentation >**.
4. Select the **Settings** tab.
5. At the bottom of the **Settings** tab, check the **Store IP Address** checkbox to enable IP address storage. (By default, the box is *not* checked.)
6. Click **Save**.
