

# Support Advisory: Compatibility issue between database agent and controller

## Summary

When upgrading to AppDynamics controller version 4.5.2, you may encounter issues with older database agent collectors. The collectors fail to collect all necessary data.

## Affected Software

This affects all database agents running versions 4.3.4 (or lower) and all database platforms.

## Resolution

Upgrade to database agent version to 4.5.4, which is our latest stable build.
