Release Notes Version 4.5.1904.1

Resolved Issues

ABAP agent fixes

ASM-265: Handling of invalid exit call correlation header (notxdetect=true) is extended and improved:

- Attempted correlation with upstream agents via invalid correlation header is now correctly ignored.
- Attempted correlation with downstream agents via invalid correlation is recorded into application log. The error message long text was updated to help with troubleshooting.

Collector settings fixes

ASM-272: Missing buttons in metrics collector setting for adding and removing setting records are available again.
